

About us

AMAGE Systems is an IT company that provides solutions for construction and manufacturing industries. We deliver on our motto, „assets under control”, by enabling our clients to fully and easily manage all their resources at a construction site or a production facility.

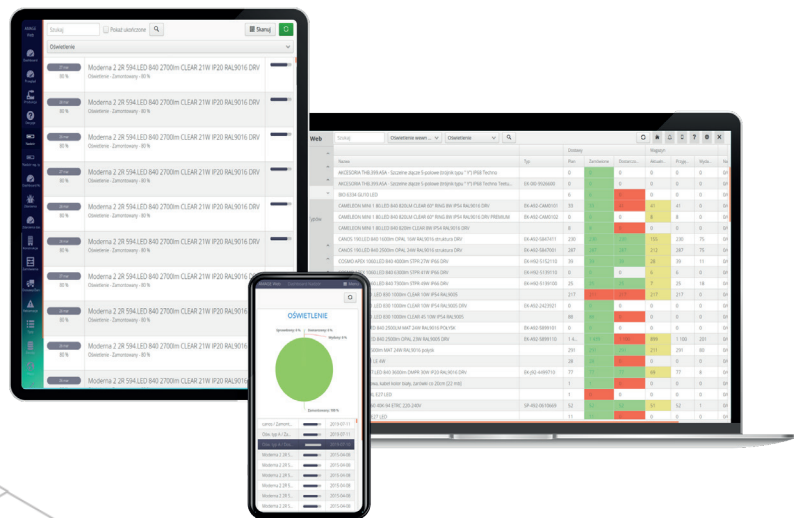

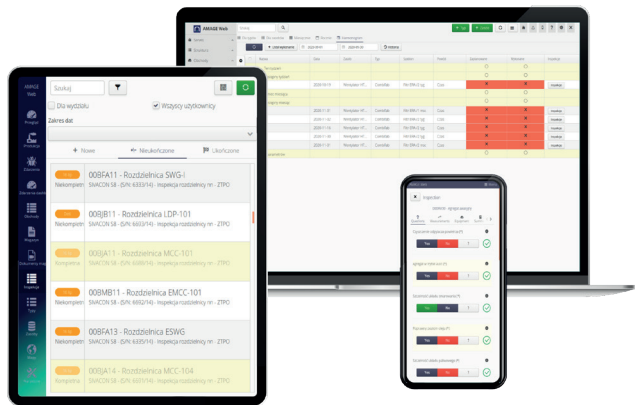

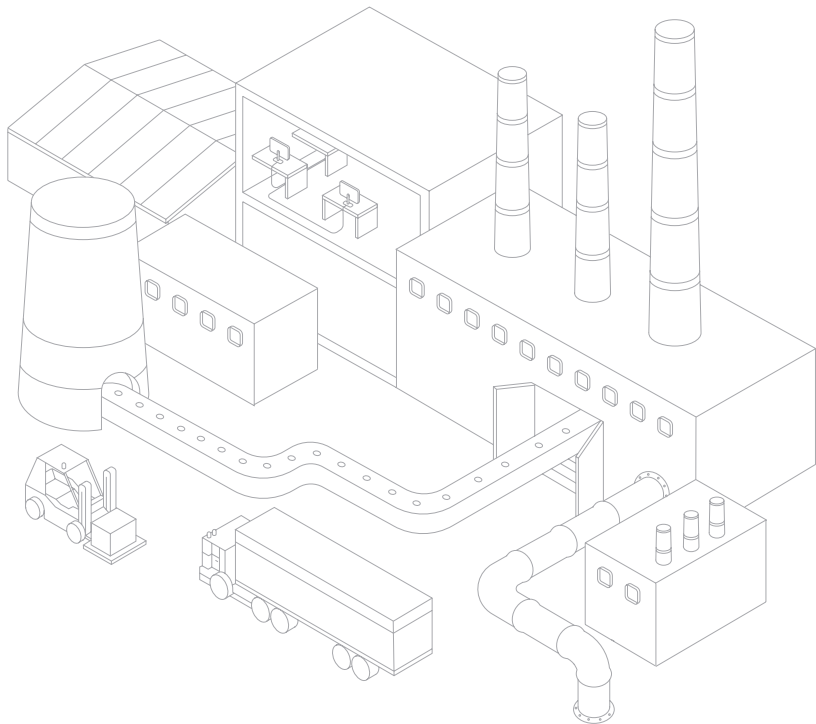

Production Companies with Design Production Profile

- Support in manufacturing highly specialised products and devices that are product of design work
- Integration with project teams to facilitate revised updates during ongoing production processes
- Detailed progress reports of all works that include their related metrics
- Support for control processes, FAT acceptance procedures, and internal quality control
- Support for service teams carrying out work for external clients
- Execution of service work within protocols; completion of inspections or inspection work commissioned by the client, together with the data sharing of the results via dedicated client portals.

Construction Companies

- Support for site coordinators in charge of assets / people
- Coordination of the circulation of materials and tools in the construction process
- Integration with design offices that includes continuous data update facilities and provides documentation for construction teams
- Detailed progress reports of all works that include their related metrics
- Reliable and accurate financial settlement facility, and lease management

Industrial Plants with Continuous Production Profile

- Support for maintenance teams
- Easy access to operational data for senior management
- Reporting of production parameters, including full production plan implementation analytics
- Monitoring of environmental parameters and limits resulting from integrated permits
- Integration of external subcontractors into the activities of maintenance services
