¹ According to Commission regulation (EU) No 432/2012. In view of the current epidemiological situation, a number of scientific studies have recently evaluated the benefits of vitamin D in the prevention and alleviation of the course of COVID-19 infection. A correlation has been found between vitamin D levels and the severity of the disease.

²The maximum permissible dose depends on the regulations of the country.

8 | **READY TO MARKET** | Soft gelatin capsules | Food supplement

PRODUCT	STATUS	INGREDIENTS
