

CLEAN ECO RYPS

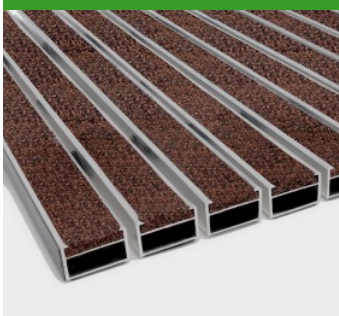

Clean Eco Ryps is an aluminium doormat with an ecological textile insert made of a material called ECONYL®.

ECONYL® is a type of nylon that is obtained by recycling nylon waste such as fabric scraps, old carpets, fishing nets and industrial nylon. These materials are collected and subjected to a complex recycling process that recovers their original purity. As a result of this process, a material with identical properties to original nylon is obtained, but with minimal impact on the environment.

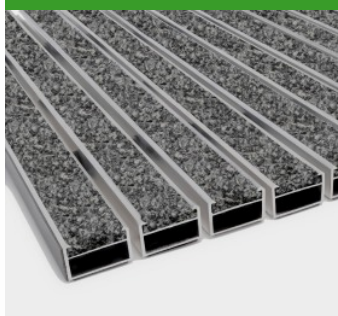

By choosing CLEAN ECO RYPS doormats, you contribute to reducing the amount of nylon waste that ends up in landfills and pollutes our planet. Additionally, underlays of our textile inserts are based on the CLARO formula and do not contain PVC or plasticisers. Their production process uses 30% less energy and emits 15% less greenhouse gases. This makes them more ecological and environmentally friendly than traditional PVC underlays, and at the same time more durable and flexible.

CLEAN ECO RYPS

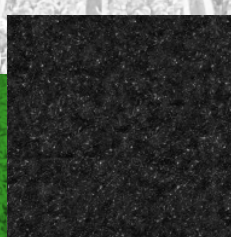

Aluminium doormats with Clean Eco Ryps textile insert, thanks to their unique moisture-absorbing properties, help maintain cleanliness and safety in the entrance area, therefore they are perfect for commercial applications, i.e. at entrances to business premises, offices, staircases and lifts.

The product is offered in 3 colours resembling the shades of natural stones. The mixture of matt and glossy fibres looks excellent in modern interiors.

Technical data of the textile insert:

Material	100% recycled (Econyl®) polyamide
Substrate	PU
Primary substrate	PET/PA non-woven fabric
Material weight, ISO 8543	850 g/m ²
Weight, ISO 8543	3,050 g/m ²
Height, ISO 1765	9,0 mm
Density, ISO 8543	0,110 g/m ³
Absorption capacity, TNO W6034	± 5,6 l/m ²
Flammability class, EN 13501	Cfl-s1
