

YOUR PARTNER
IN BULK CONVEYORS SPARE PARTS

Our core business is a wide range of rollers and steel frames for bulk goods conveying systems. Our products guarantee quality and durability under the most demanding circumstances, typical for mining, quarrying, tunneling, recycling, construction and other industry sectors.

Our flexibility and individual approach to customers' requirements, high-quality products, competitive prices and short lead times are the main values of our company. We always aim at establishing long-term relations with our customers and we focus on continuous development in every aspect of our activity.

As a result of many years of close cooperation with our partner company **INTERkrąż** – the roller industry leader – **Acer** is responsible for all export activities and business relations with customers on international markets.

Our rollers range includes: steel smooth rollers, impact rollers, return disc rollers, rubber lagged rollers and guide rollers. Rollers are produced with welded bearing housing, sealing system with labyrinth seal and greased for life bearings.

On demand the rollers are treated with various types of anti-corrosion protection including primer coating, powder paint coating or zinc plating. We offer a wide variety of shaft ends including garland type. Please visit our web page for detailed information: www.acerpoland.pl

STEEL ROLLER

Our steel smooth rollers are available in diameter of: 51; 63,5; 89; 108; 133 and 159 mm. Length of rollers according to customers' requirements.

DISC RETURN ROLLER

Used on the return side of the conveyor belt. The pointed discs can be combined with the flat rings, many diameters in various configurations are available.

IMPACT ROLLER

Used at a loading point of a conveyor. The rubber impact rings are mounted side by side on the full length of steel tube to absorb the impact and weight of material falling onto the belt.

RUBBER-LAGGED ROLLER

The roller tube is covered with high quality hot vulcanized rubber increasing its durability.

GUIDE ROLLER

Guide rollers, installed on both sides of the belt, help prevent belt misalignment and therefore reduce possibility of conveyor damage.

CONVEYOR FRAME

Our high-quality welded conveyor frames are designed for optimal roller support and proper belt guidance. Available for standard belt width as well as meeting customer's specific requirements and design.
